

MY BOOKING CENTRE

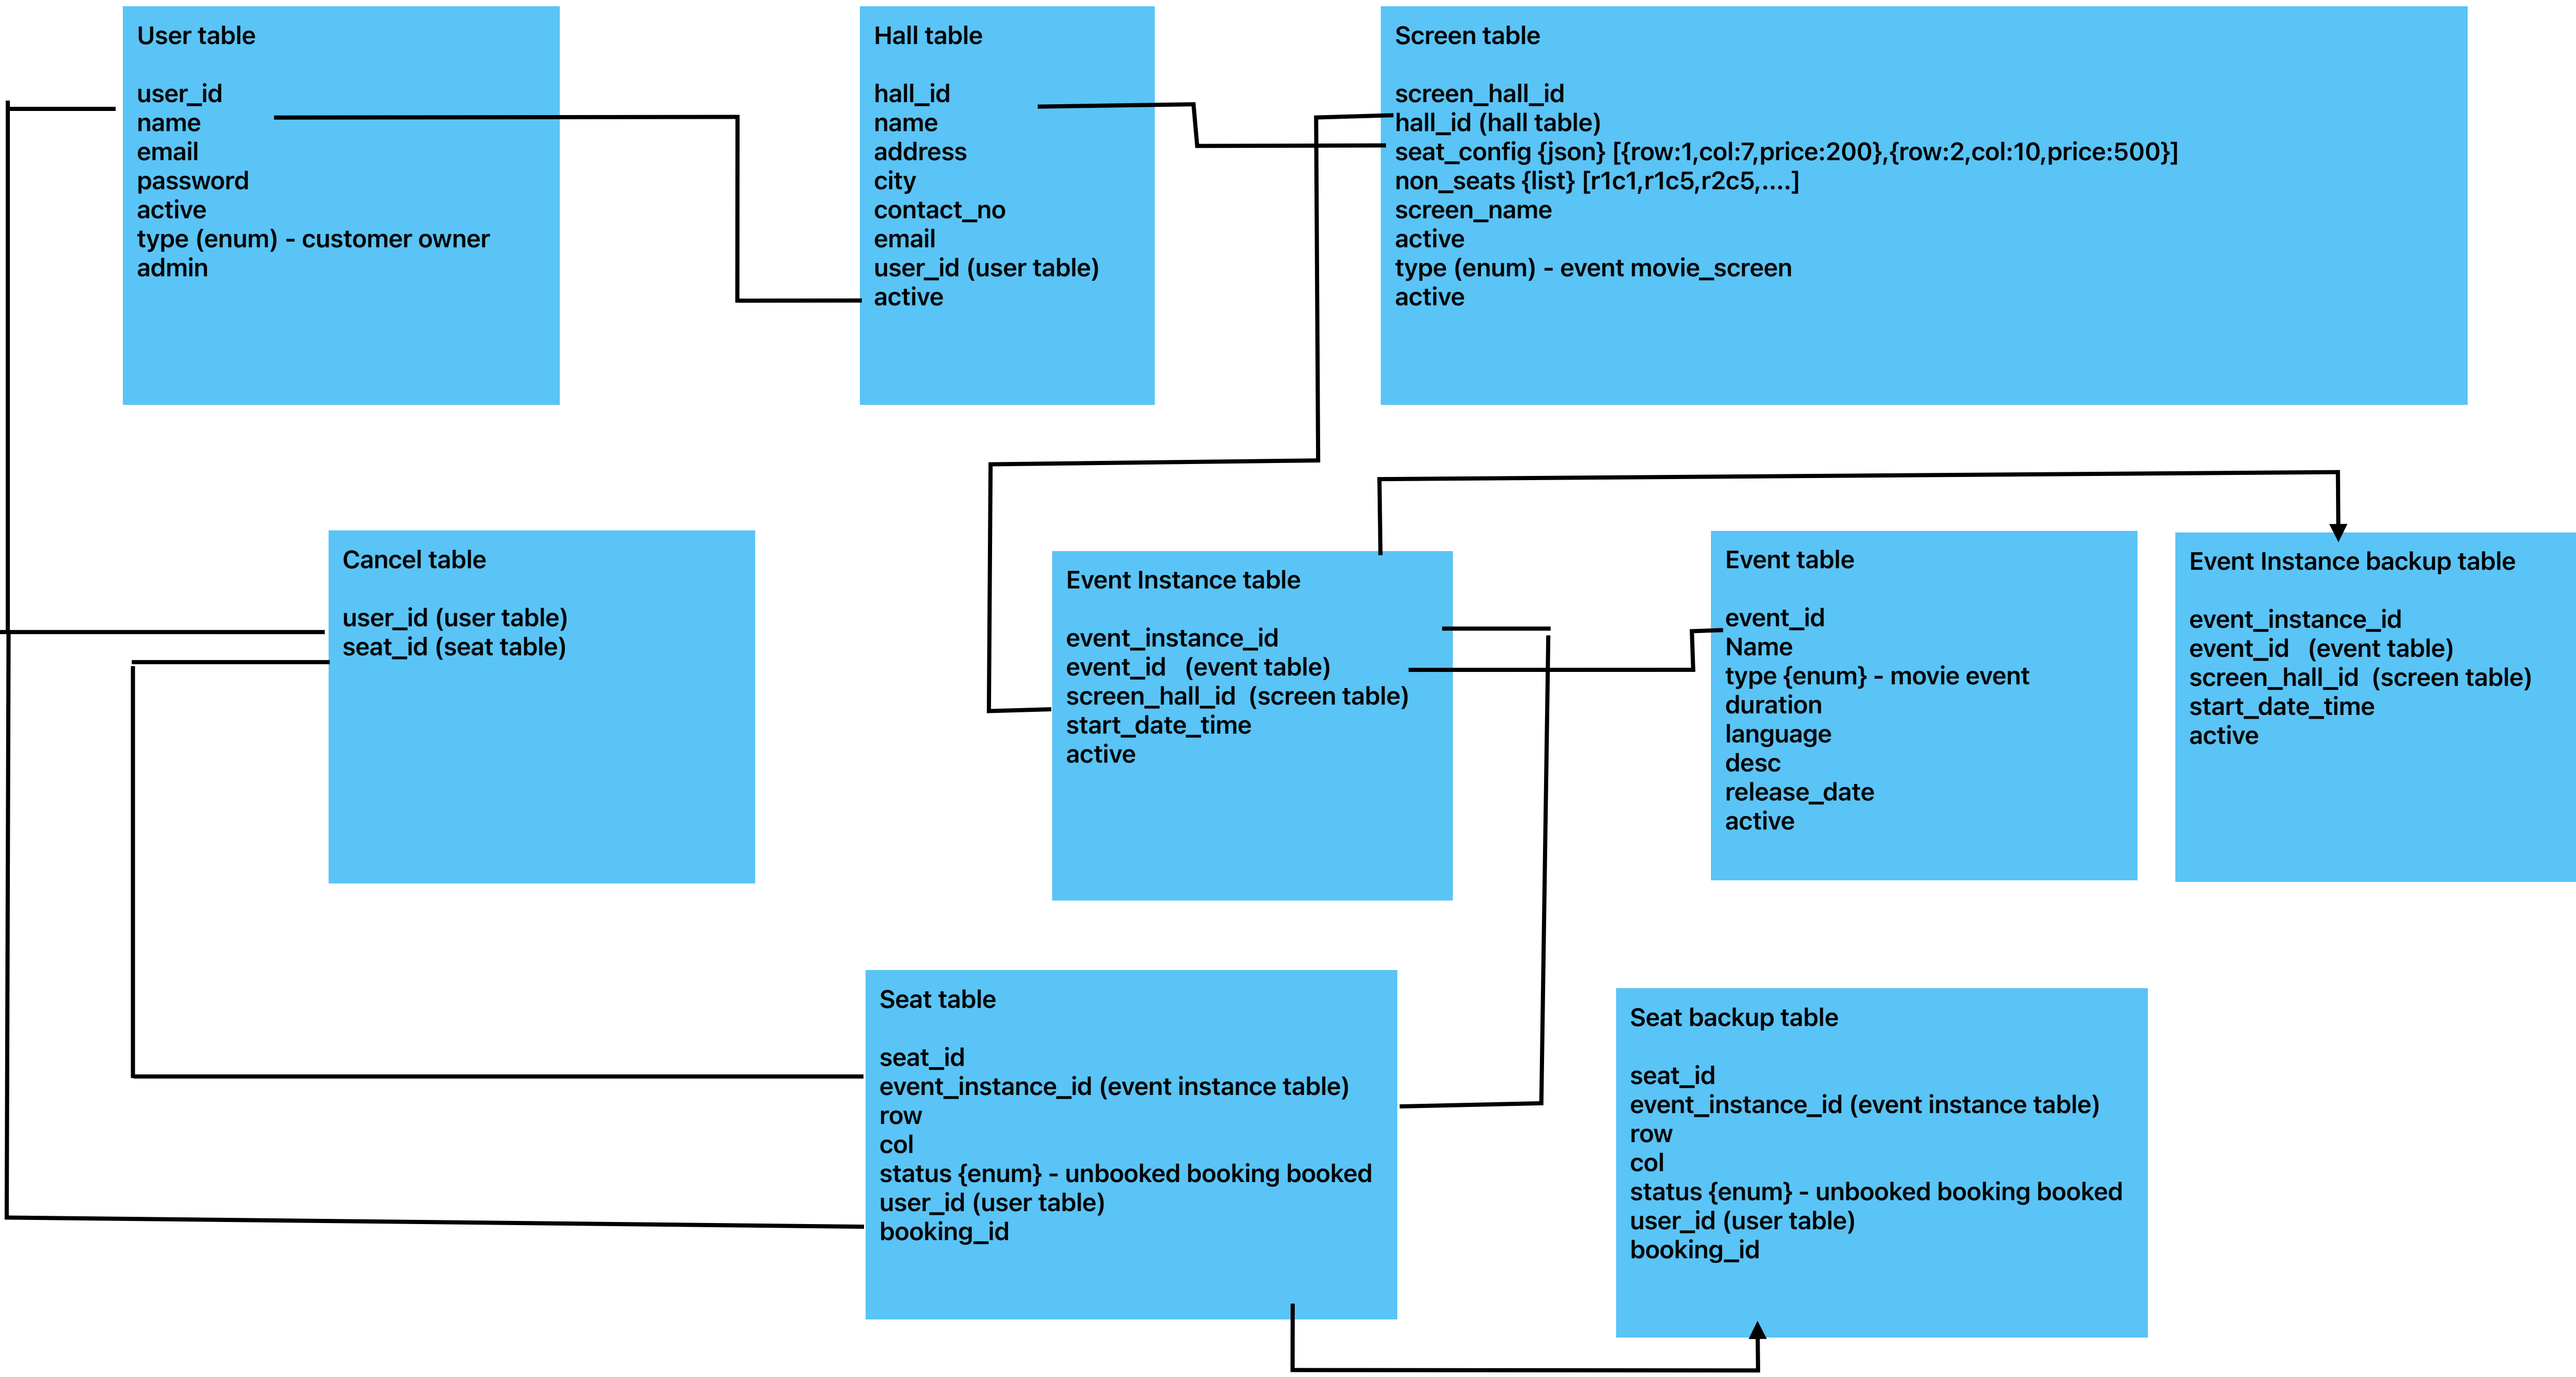

Problem statements

1. Users are of 3 types , customer, owner (hall owner) and admin.
2. Customer can book tickets and cancel them
3. Owner can have multiple halls, each hall can have multiple screens
4. Screen could be of 2 types. First type is having actual seats. 2nd type can could be of 2 types. First type is having actual seats. 2nd type can have variety of seats but not exact seat number
5. Screen seats layout should be dynamic with gaps too .
6. Users and halls could be deactivated
7. Admin will activate the movie that is released in multiple languages
8. Owner will have those movies to display in their screens.
9. Owner also have permission to keep their own events in their screens
10. Notification system for events

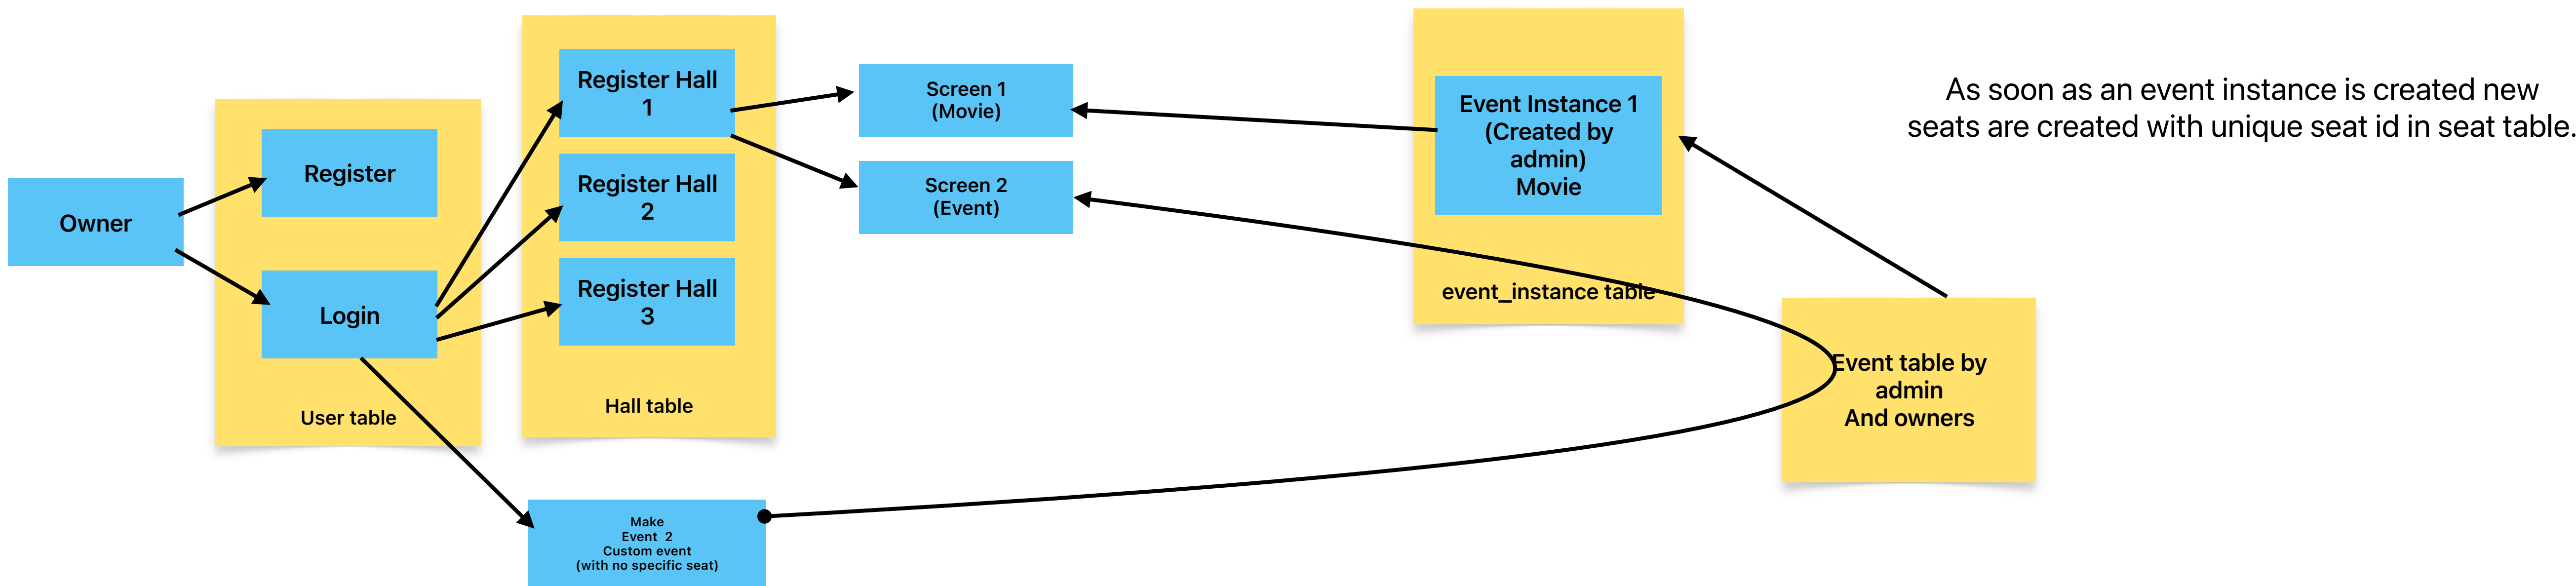

Entities

1. Users - (customer , Owner [hall owners] , admin)
2. Hall (inside these are various screens
3. Screen (inside these events take place)
4. Event instance (exact event and sitting arrangement of the hall)
5. Seat

Database for app
